Ask us about:

Secure Email

Data Backup

Security Audits

Network and Server Monitoring

Real Time Protection

Protection round the clock – With real-time protection every file that is accessed is scanned instantly for potential threats. Your devices are protected the second TTM Anti-Malware is activated on them.

Certified Protection: VB100

Our Anti-Malware solution has been awarded the VB100 certification for reliability by the magazine "Virus Bulletin". This award certifies a detection rate of 100% of malicious software listed as "in the Wild" by the "WildList Organization" in addition, anti-malware software awarded this certification must not generate ANY false positives.

While TTM has selected our Anti-Malware offering by testing 100's of different products no Virus/Malware protection is capable of protecting your PC 100%, as there is always a delay from when a new threat arises until it can be stopped. We choose our offering using a service that re-acts quickly and proactively in mitigating new threats.
